

Did you know that parcels are sorted according to their labels by an automatic scanner? That is why correctly attached high-quality labels are important. Using a label like this allows us to deliver your parcel quickly!

### What to remember when attaching the label?

- Always ensure **HIGH-QUALITY PRINTING OF THE LABEL** and use a laser printer (not inkjet).
- Label the parcel with **one shipping label** and stick it on **the top** of the parcel so that it is **fully visible** (not covered by adhesive tape, parcel strapping or foil). At the same time, make sure that the label does not overlap onto the side of the parcel.
- **Do not place the label on the side of the parcel.**
- Remove any old labels or misleading information from the parcel.

Ideal position to stick the label

*Bad quality printing*

*Covered with strapping*

*Covered with foil*
